Anti-Ligature Light Switch Cover

Protects vulnerable
services from
vandalism and
unauthorised use

Light switches can often be subjected to vandalism which can be an electrical shock risk and in mental health environments can even be a ligature risk.

The miss use of lights can also be an issue such as emergency lighting being turned on as a night light. This then drains the batteries and cannot be used when needed in the event of an emergency.

Contours Anti-Ligature light switch cover gives access to authorised staff and prevents the light switch being vandalised.

Contour Heating Products Ltd.
The Mansions, 43 Broadway, Shifnal
Shropshire, TF11 8BB
